24-APR-2001 (first entry)

Ghrelin-like growth hormone secretagogue (GHS) core region peptide #3.

growth hormone deficiency. Growth hormone secretagogue; GHS; ghrelin; core region; calcium concentration elevation; infant growth disorder;

Rattus norvegicus.

Homo sapiens. Sus scrofa.

WO200107475-A1. Bos taurus.

                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that a least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a slow encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promothing infant growth due to growth no accompanying side effects. The present sequence represents a no accompanying side effects. The present sequence region sequence.
                                                                                                                                                                                                                                                                                                                            ö

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid ongound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides invention and an assay and kit for detecting the peptides caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth an accompanient of the invention are useful for promoting infant growth due to growth an accompanient and an account of the invention are safe with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ghrelin-like growth hormone secretagogue (GHS) core region, SEQ ID NO:9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis of infant growth disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   no accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by CC a modified amino acid and/or a non-amino acid compound. The invention CC also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases CC caused by a deficiency in growth hormone expression or activity. In CC particular, they are useful for promoting infant growth due to growth CC hormone deficiency. The compounds of the invention are safe with CC no accompanying side effects. The present sequence represents a CC capted by a deficiency selection. The present sequence region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of novel peptide fragment SGIP of zsig33 (see AAB20101), a previously described secreted protein that is transcribed in the gastrointestinal system. SGIP is a contract that is transcribed in the gastrointestinal system. SGIP is a contract the contract the contract that is therefore useful for modulating secretion of growth hormone and insuling like growth factor 1. SGIP and its variant peptides, comprising residues 1-9, 2-9, 3-9, 4-9, 2-10, 3-10, 4-10, 3-11 or 4-11 of SGIP in which at least 1 residue may be substituted, are used in claimed methods for stimulating contractability in duodenum or jejunum that its methods for stimulating contractability in duodenum or jejunum crissue, modulating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying. Amino acid substitutions in SGIP may result in agonist crasing antibodies, identifying the SGIP receptor, screening cagonists and antagonists, and identifying cells, tissues or cell lines which respond to a SGIP-stimulated pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Loc

The invention relates to a method of forming a reversible peptide-
receptor complex that involves providing an immobilized receptor, and
contracting the receptor with a zsig33 peptide (Comprising residues 24-37
of AAB65649), where the receptor binds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
contracting secretion of hormones, neural development and/or utilization,
castric contractility, nutrient uptake, secretion of digestive and
contractility, nutrient uptake, secretion of digestive and
pancreatic enzymes and hormones, secretion of insulin-like growth factor
contractility, nutrient uptake, secretion of insulin-like growth factor
contractility, nutrient uptake, secretion of insulin-like growth for mone secretion in a mammal having a disease associated with abnormal levels of growth hormone, such as osteoporosis, bone repair, bone
contractiling, low osteoblast levels, cartilage repair and remodeling,
contein catabolic responses after surgery, cachexia, protein loss,
contein catabolic responses after surgery, cachexia, protein loss,
contractiling, nound healing and ovulation induction, treating a mammal having
contraction, glucose absorption and metabolism and neuropathy-associated
contraction in a mean dismulating glucose-induced insuling
contractility and ovulation and metabolism and neuropathy-associated
contractility and contraction and metabolism and neuropathy-associated
contractility and contraction and metabolism and neuropathy-associated
contractility and contractility and contraction and metabolism and stimulation incestians.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             release in a mammal. The present sequence represents a human zsig33 peptide epitope, used to raise zsig33 anti-peptide antibodies.
                                                                                                                                                                                                                                                                                                                                                                     Forming reversible peptide receptor complex for purifying cell and peptides, stimulating signal transduction and modulating hormone secretion, involves contacting a receptor with zsig33 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 40; DB 22; Length 19; 100.0%; Pred. The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are girelin homologues and are concentration in cells. The peptides are girelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides overtors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with a companying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                    New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis of infant growth disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion CC concentration in cells. The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by CC a modified amino acid and/or a non-amino acid has been substituted by CC also encompasses the unmodified peptides; the DNA encoding the peptides; core rors and host cells comprising such DNA; a method of producing the CC peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention; and assay and kit for detecting the peptides. The peptides cof the invention are useful for treating and/or diagnosing diseases CC of the invention are useful for promoting infant growth due to growth CC particular, they are useful for promoting infant growth due to growth CC particular, they are useful for promoting infant growth due to growth CC no accompanying side effects. The present sequence represents a CC ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Loc

characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New peptide compounds which induce growth elevate cell calcium concentrations, usefu of infant growth disorders -

```
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides, the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification, an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.

Agents for treating diseases associated with denaturation or death neurons comprise growth hormone liberation inhibitor

οŧ

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are directlin homologues and are concartration in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising second, and a massay and kit for detecting the peptides. The peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with an accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.

Claim 2; Page 180; 210pp; Japanese.

infant growth disorders

The present invention provides agents for treating or preventing diseases associated with denaturation or death of neurons, which comprise a growth hormone liberation inhibitor. These can be used for treating or

```
ö
preventing diseases associated with denaturation or death of neurons including those due to cerebral isohemic disorders such as cerebral infarction or oedema. Other causes of denaturation or death of neurons included Alzheimer's disease, Pick's disease, AIDS related dementia, Parkinson's disease, amyocrophic lateral sclerosis, diabetic neuropathy and anticancer treatments. The present sequence is a peptide described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SX
                                                                              The invention relates to a novel peptide compound or its salt which . CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in that at least one amino acid has been substituted by caracterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention calso encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention, and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases cof the invention are useful for promoting infant growth due to growth Darmone deficiency. The compounds of the invention are safe with con accompanying side effects. The present sequence represents a great present sequence represents a growth hormone secretagogue (GHS) of the invention.

                                                                                                                                                                                                                                                                                The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are CC concentration in cells. The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by a less encompasses the unmodified peptides; the DNA encoding the peptides; compound. The invention CC also encompasses the unmodified peptides; the DNA encoding the peptides; cetors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases CC of the invention are useful for treating and/or diagnosing diseases CC caused by a deficiency in growth hormone expression or activity. In CC particular, they are useful for promoting infant growth due to growth CC no accompanying side effects. The present sequence represents a CC ghrelin-type growth hormone secretagogue (GHS) of the invention.

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are girelin homologues and are concentration in cells. The peptides are girelin homologues and are characterised in that at least one amno acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides caused by a deficiency in growth hormone expression or activity. In particular, they are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promocing infant growth due to growth common deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        peptide compounds which induce growth hormone secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Minamitake Y;

```
The present invention relates to a truncated ghrelin analogue or their salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or females, facilitating a weight gain, maintenance of weight, maintenance of physical functioning, recovery of physical function, and/or appetite increase or appetite increase is particularly useful for a patient comparing a disease or disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulind, cancer cachexia, acquired immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail closs such as anorexia, bulind, cancer cachexia, acquired immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail closs; such as anorexia, bulind, cancer cachexia, acquired immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail comparing the distribution of treation therapy, tentenance, treat obesity, diabetes and complications of diabetes including retinopathy, and/or cardiovascular disease, gall stones, osteoarthritis and certain forms of cancers, and chiseases including hypertension, diabetes, dyslipidemias, cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular complications of such diseases and for treating such diseases. Ghrelin analogue induces growth hormone release from primary-culture pitutery cells in a dose-dependent manner without stimulating the release of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be companied as with a signification of bulbility in partial analogue can be considered as an analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is human ghrelin peptide analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 40; DB 23; Similarity 100.0%; Pred. -I-FUNCTION: PPIASE THAT BINDS CALMODULIN (BY SIMILARITY).

-I-CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMDIC PEPTINE BONDS IN OLIGOPETIDES.

-I-MISCELLANEOUS: ON THE 2D-GEL THE DETERMINED PI OF THIS PROTEIN IS: 5.3, ITS MI IS: 72 kDa.

-I-SIMILARITY: BELONGS TO THE FKBP-TYPE PPIASE FAMILY.

INTETPRO; IPRO1179; FKBP-PPIASE.

PROSITE; PS00454; FKBP-PPIASE.

PROSITE: PS00454; FKBP-PPIASE.

Ele procein complexes of plant mitochondria.";
Plant J. 9:357-368(1996).
-!- FUNCTION: THIS PROTEIN SEEMS TO BE PART OF THE STALK THAT LINKS
CF(0) TO CF(1). IT EITHER THANSMITS CONFORMATIONAL CHANGES FROM CF(0) INTO CF(1) OR IS IMPLICATED IN PROTON CONDUCTION.
-!- CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gapa

antagonises the effect of ghrelins when administered

which

```
ghrelins when administered to a mammal. The peptide is a synthetic analogue of ghrelin. Ghrelin is a 27-28 residue peptide isolated from distinctive cell types in the stomach of rats and humans and has an octanoyl ester attached to a serihe residue. Ghrelin is a potent releaser of growth hormone. The peptides are useful for normalising elevated growth hormone levels in mammals such as those suffering from a tumour related to overproduction of growth hormone or acromegaly. The present sequence is a ghrelin antagonising peptide of the

New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis Claim 3; Page 185; 210pp; Japanese. of infant growth disorders -

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides, the DNA encoding the peptides, vectors and host cells comprising such DNA; a method of producing the

chemical modification; an antibody specific for a peptide of the invention, and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention. δ peptides comprising recombinant production, optionally

                                                                                                                                                                                                                                                                          The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by CC a modified amino acid and/or a non-amino acid compound. The invention CC also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the cCC peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases CC of the invention are useful for promoting infant growth due to growth CC particular, they are useful for promoting infant growth due to growth CC particular, they are useful for promoting infant growth due to growth CC particular, they are useful for promoting infant growth due to growth CC particular, side effects. The present sequence represents a CC ghrelin-type growth hormone secretagogue (GHS) of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are girelin homologues and are characterised in that at least one amno acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth to mo accompanying side effects. The present sequence represents a parellin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ï

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concernation in cells. The peptides are ghrelin homologues and are concarcatised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a least one compound. The invention also encompasses the unmodified peptides, the DNA encoding the peptides overtors and host cells comprising such DNA, a method of producing the peptides comprising recombinant production, optionally followed by chemical modification, an antibody specific for a peptides. The peptides of the invention, and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; ghrelin analogue; growth-hormone secretagogue; GHS receptor; AIDS; acquired immune deficiency syndrome; weight gain; chemotherapy; dialysis; growth hormone; muscle mass; bone density; sexual dysfunction; anorexia; wasting; radiation therapy; obesity; diabetes; retinopathy; hypertension; cardiovascular disorder; gall scone; ostecarthritis; cancer; cytostatic; metabolic; immunomodulator; anti-HIV; anorectic; ophthalmological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18;

                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                CC salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin CC receptor and for stimulating a compound capable of binding to GHS CC receptor and for stimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone deficient state, increasing CC is utilised for treating a growth hormone deficient state, increasing CC females, facilitating a weight gain, maintenance of weight, maintenance of physical functioning, recovery of physical function, and/or appetite increase is particularly useful for a patient CC increase, or appetite increase is particularly useful for a patient CC having a disease or disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulimia, cancer cachexia, acquired commune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail CC eight loss such as anorexia, bulimia, cancer cachexia, acquired commune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail CC eight loss include the treatments accompanied by weight loss include CC complications of diabetes including retinopathy, and/or cardiovascular CC disorders, where excessive weight is a contributing factor to different CC diseases including hypertension, diabetes, dyslipidemias, cardiovascular CC disease, gall stones, osteoarthritis and certain forms of cancers, and CC ringing about a weight loss can be used for e.g. to reduce the CC likelihood of such diseases and for treating such diseases. Ghrelin CC analogue induces growth hormone release from primary-culture pituitary CC cells in a dose-dependent manner without stimulating the release of other pituitary hormones. Unlike longer length ghrelin analogue can be synthesised easily and has increased solubility in physiological buffers. The present sequence is human ghrelin peptide analogue.

CC females, facilitating a weight gain, maintenance of weight, maintenance of conference, or appetite increase is particularly useful for a patient continuity a disease or disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulimia, cancer cachexia, acquired commune deficiency syndrome (AIDS), weathering, cachexia and wasting in frail celerly and examples of treatments accompanied by weight loss include community of the camples of treatments accompanied by weight loss include commotherapy, radiation therapy, temporary or permanent immobilisation and dialysis; and ghrelin antagonist is utilised to facilitate weight complications of diabetes including retinopathy, and/or cardiovascular complications of diabetes including retinopathy, and/or cardiovascular disorders, where excessive weight is a contributing factor to different consenses including hypertension, diabetes, dyslipidemias, cardiovascular contriging about a weight loss can be used for e.g. to reduce the collisor and osse-dependent manner release from primary-culture pituitary collis in a dose-dependent manner without stimulating the release of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be contributed in a castivascular contributes and cortain such diseases of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be contributed analogue can be somether sequence is human ghrelin peptide analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or muscle mass and bone density, treating sexual dysfunction in males or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as ano bullmia, cancer, obesity, diabetes mellitus, hypertension, osteoarthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Key

The present invention relates to a truncated ghrelin analogue or their salt, active at growth-hormons secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS caceptor and for stimulating growth hormons secretion. Ghrelin agonist is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or females, facilitating a weight gain, maintenance of weight, maintenance of physical functioning, recovery of physical function, and/or appetite increase is particularly useful for a patient configurable of sorder, or under going a treatment, accompanied by increase, or appetite increase is particularly useful for a patient configurable of sorder, bullinia, cancer cachexia, acquired having a disease or disorder, bullinia, cancer cachexia, acquired sight loss such as anorexia, bullinia, cancer cachexia, acquired the eight loss such as anorexia, bullinia, cachexia and wasting in frail clederly syndrome (AIDS), wasting, cachexia and wasting in frail clederly and examples of treatments accompanied by weight loss include complication therapy, temporary or permanent immobilisation and dialysis, and ghrelin antagonist is utilised to facilitate weight complications of diabetes including retinopathy, and/or cardiovascular complications of diabetes including retinopathy, and/or cardiovascular diseases including hyperension, diabetes, dyslipidemias, cardiovascular complications of diabetes including retinopathy, and cortain forms of cancers, and diseases including hypertension, diabetes, dyslipidemias, cardiovascular confices, gall stones, osteoarthritis and certain forms of cancers, and bringing about a weight loss can be used for e.g. to reduce the bringing about a weight loss can be used for e.g. to reduce the bringing about a weight loss can be used for e.g. to reduce the bringing of calls in a dose-dependent manner without stimulating the release of other spituitary hormones. Unlike longer length ghrelin g Example 4; Page 23; 37pp; English.

The present sequence is human ghrelin peptide analogue. polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the polynucleotide. Specific cancer, tumors, neurodegenerative disorders, developmental abnormalities and fetal deficiencies, blood disorders, schologis, diseases of the immune cognitive disorders, inflammation, allergies, Alzheimer's and system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, enclosue disorders, eschoporosis, arthritis, infections, AlDS, connective tissue disorders, transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, and reproductive disorders. The polypeptides or polynucleotides can AAY40001-92 are derived from human secreted proteins.

The present invention describes a new method of treating a body weight disorder; increasing muscle mass and decreasing body fat by administration of angiotensin converting enzyme (ACE)-2 modulating compound. The invention can be used for treating body weight disorders, particularly obesity of at least grade 1, diabetes, atherosclerosis and a state associated with lipid metabolism. The method is used for treating rapid weight loss, rapid weight gain, anoraxia, cachexia, bulimia, generalised partial lipodystrophy, familial partial lipodystrophy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; ghrelin analogue; growth-hormone secretagogue; GHS receptor; AIDS; acquired immune deficiency syndrome; weight gain; chemotherapy; dialysis; growth hormone; muscle mass; bone density; sexual dysfunction; anorexia; wasting; radiation therapy; obesity; diabetes; retinopathy; hypertension; cardiovascular disorder; gall stone; osteoarthritis; cancer; cytostatic; metabolic; immunomodulator; anti-HIV; anorectic; ophthalmological; cardiant; litholytic; hepatotropic.
       also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides; peptides comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by ehemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases of the invention are useful for treating and/or diagnosing diseases particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a truncated ghrelin analogue or their salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as anorexia, bulimia, cancer, obesity, diabetes mellitus, hypertension,
                                                                                                                                                                                                                                                                                                                             Gaps

cc is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or females, facilitating a weight gain, maintenance of weight, maintenance of physical functioning, recovery of physical function, and/or appetite increase is particularly useful for a patient increase, or appetite increase is particularly useful for a patient control ad disease or disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulina, cancer cachexia, acquired immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail clearing and examples of treatments accompanied by weight loss include chemotherapy, radiation therapy, temporary or permanent immobilisation and dialysis; and ghrelin antagonist is utilised to facilitate weight complications of diabetes including retinopathy, and/or cardiovascular disorders, where excessive weight maintenance, treat obesity, diabetes and complications of diabetes including retinopathy, and/or cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular diseases including prones, osecoarthritis and certain forms of cancers, and bringing about a weight loss can be used for e.g. to reduce the consideration of such diseases and for treating such diseases. Ghrelin analogue induces growth hormone release from primary-culture pituitary cells in a dose-dependent manner without stimulating the release of other the release.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present invention relates to a truncated ghrelin analogue or their call, active at growth hormone secretagogue (GHS) receptor. Ghrelin canalogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone secretion. Ghrelin agonist can the state of the stimulating growth hormone secretion. Ghrelin agonist can utilised for treating a weight gain, maintenance of weight, maintenance of feelitating a weight gain, maintenance of weight, maintenance of feelit to gain a discrease, or appetite increase is particularly useful for a patient can increase, or appetite increase, bulinia, cancer cachexia, acquired immune deficiency syndrome (AIDS) wasting, cachexia, acquired chaving a discrease of treatments accompanied by weight loss such as anorexia, bulinia, cancer cachexia, acquired immune deficiency syndrome (AIDS) wasting, cachexia, acquired chemotherapy, radiation therapy, temporary or permanent immobilisation and dialysis; and ghrelin antagonist is utilised to facilitate weight loss, appetite decrease, weight maintenance, treat obseity, diabetes and complications of diabetes including retinopathy, and/or cardiovascular diseases including hypertension, diabetes, treat obseity, diabetes and complications of diabetes including retinopathy, and/or cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular complications of cancers, and bringing about a weight loss can be used for e.g. to reduce the canalogue induces growth hormone release form primary-culture pituitary can be used for e.g. to reduce the synthesised easily and has increased solubility in physiological buffers. The orsesent secuence is human observation sortion primary-culture pituitary and the release of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be synthesised easily and has increased solubility in physiological buffers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as anorexia, bulimia, cancer, obesity, diabetes mellitus, hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 4; Page 33; 37pp; English
The present sequence is human ghrelin peptide analogue.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gastrin-releasing peptide from the intestine of the elasmobranch
fish, Scyliorhinus canicula (common dogfish).";
Gen. Comp. Endocrinol. 68:415-420 (1987).
-! FUNCTION: GRP stimulates gastrin release as well as other
gastrointestinal hormones.
-! SUBCELLULAR LOCATION: Secreted.
-! SUBCELLULAR LOCATION: Secreted.
-! SIMILARITY: BELONGS TO THE BOMBESIN/NEUROMEDIN B/RANATENSIN
                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

MA Abe Y., Okazaki T.;

"Purification and properties of the manganese superoxide dismutase
of from the liver of bullfrogy, Rana catesbelana.";

I Arch. Biochem. Biophys. 253:241-248(1987).

C. I - FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.

C. I - CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

C. I - COPACTOR: Manganese.

C. I - SUBGRILLAR LOCATION: Mitochondrial matrix.

C. I - SUBCLIULAR LOCATION: Mitochondrial matrix.

PAMILY: PAMILY.
                                                                                                                                                                                                                                                                                                                              a Carnobacterium sp.";
Appl. Environ. Microbiol. 58.1417-1422(1992).
